Firewall > DMZ

The DMZ feature allows you to specify one computer on your network to be placed outside of the NAT firewall. This may be necessary if the NAT feature is causing problems with an application such as a game or video conferencing application. Use this feature on a temporary basis. The computer in the DMZ is not protected from hacker attacks. To put a computer in the DMZ, enter the last digits of its IP address in the field below and select "Enable". Click "Apply Changes" for the change to take effect. **More Info**

IP Address of Virtual DMZ Host >

	Static IP	Private IP	Enable
1		192.168.2. 50 ⟵ 3	☑ ⟵ 2
